Preface

The Job Accommodation Network (JAN) is funded by a contract with the Office of Disability Employment Policy, U.S. Department of Labor. JAN makes documents available with the understanding that the information be used solely for educational purposes. The information is not intended to be legal or medical advice. If legal or medical advice is needed, appropriate legal or medical services should be contacted.

JAN does not endorse or recommend any products or services mentioned in this publication. Although every effort is made to update resources, JAN encourages contacting product manufacturers/vendors and service providers directly to ensure that they meet the intended purposes. This guarantees that the most up-to-date information is obtained.

The following document is not copyrighted and reproduction is encouraged. Section 105 of the Copyright Law provides that no copyright protection is available for works created by the U.S. Government. Therefore, all works created by JAN fall under this provision. While individuals may use such work with impunity, individuals may not claim copyright in the original government work, only in the original material added. Individuals may access the full text of the law from the U.S. Copyright Office <https://www.loc.gov/copyright>. Please note that specific information cited by JAN may be copyrighted from other sources. Citing secondary sources from a JAN publication may violate another organization's or individual's copyright. Permission must be obtained from these sources on a case-by-case basis. When using JAN materials, JAN asks that the materials not be reproduced for profit, that the tone and substance of the information are not altered, and that proper credit is given to JAN as the source of the information. For further information regarding this or any other document provided by JAN, please contact JAN.

Updated 01/24/2019.

JAN'S Accommodation and Compliance Series

Introduction

JAN's Accommodation and Compliance Series is designed to help employers determine effective accommodations and comply with Title I of the Americans with Disabilities Act (ADA). Each publication in the series addresses a specific medical condition and provides information about the condition, ADA information, accommodation ideas, and resources for additional information.

The Accommodation and Compliance Series is a starting point in the accommodation process and may not address every situation. Accommodations should be made on a case by case basis, considering each employee's individual limitations and accommodation needs. Employers are encouraged to contact JAN to discuss specific situations in more detail.

For information on assistive technology and other accommodation ideas, visit JAN's Searchable Online Accommodation Resource (SOAR) at <https://askjan.org/soar>.

Information about Stroke

Many individuals who have had strokes recover without limitations. Some individuals have temporary limitations while others have more long-term issues. Strokes can occur at any age, but are more common in people 65 years or older. Individuals who have had strokes can have short or long-term limitations that are cognitive or motor related.

Accommodations for individuals who have had a stroke vary, but for those with vision loss, technologies are available to help them overcome these limitations. These technologies may help with reading printed material, accessing computer information, writing notes and completing forms, accessing a telephone, working with money, reading from an instrument, assembling parts, driving, working with light sensitivity, distinguishing colors, and being mobile.

Hemiparesis, which is a weakness of one side of the body, is one of many residual effects of having a stroke that limit physical or motor functioning. Depending on the area of the brain where the stroke occurred, either the left or the right side of the body may experience a reduction in muscle strength. The degree to which motor functioning is limited depends on the individual and improvement in physical ability can be seen as a result of therapy and various forms of treatment. Hemiparesis can also limit an individual's ability to perform a job or parts of a job, and those planning or preparing to return to work following a stroke may need to explore accommodation options. An individual experiencing hemiparesis may have difficulty walking, standing, balancing, climbing, grasping, or gripping objects for precision or detailed work tasks, and could

experience general muscle fatigue or a lack of coordination. Depending on the type of job and the essential functions of the position, one or more accommodations may be needed to ensure that a return to work is successful for an individual with hemiparesis.

Strokes can also impact communication in a variety of ways depending on the part of the brain affected. Three typical speech and language impairments arising from stroke include dysarthria and apraxia, which impact one's control over the movements of the muscles used in speaking; and aphasia, which causes difficulty understanding and using language. Some individuals who are recovering from stroke may have undergone evaluations to determine whether they would be helped by assistive technology such as augmentative and alternative communication (AAC) devices. This may be more likely for individuals with severe apraxia of speech that is not responding well to other treatments. They may also have learned or be in the process of learning compensatory techniques such as using a slower rate of speech or using other communication methods like typing, writing, drawing, or gesturing to support and enhance communication.

A stroke is a life-changing event that can affect an individual's emotional well-being as much as his/her physical function. Many of us know and understand the physical (weakness, paralysis), cognitive (memory, processing), and communication (speech, language) challenges stroke survivors face, but we may not be aware of the challenges faced when mood disorders occur as result of a stroke. Although stroke effects are unpredictable, mood disorders such as depression, anxiety, and pseudo-bulbar affect (PBA) are common.

In general, accommodations could include the purchasing of equipment or assistive technology for an individual who uses a computer or performs detail-oriented assembly work. If an individual uses a mobility aid such as a scooter or wheelchair, worksite and/or workstation modifications may need to be made. A restructuring of a job, either to perform essential functions in a different way or reallocate marginal functions, flexibility in breaks, and leave to seek treatment may be potential accommodations to explore. Reassignment to a vacant position may be necessary if accommodations cannot be made in the current job or if an accommodation would pose an undue hardship.

JAN's [Effective Accommodation Practices \(EAP\) Series: Executive Functioning Deficits](#) is a publication detailing accommodations for individuals with limitations related to executive functioning. These ideas may be helpful in determining accommodations.

Stroke and the Americans with Disabilities Act

The ADA does not contain a list of medical conditions that constitute disabilities. Instead, the ADA has a general definition of disability that each person must meet. A person has a disability if he/she has a physical or mental impairment that substantially limits one or more major life activities, a record of such an impairment, or is regarded as having an impairment. For more information about how to determine whether a person has a disability under the ADA, see [How to Determine Whether a Person Has a Disability under the Americans with Disabilities Act Amendments Act \(ADAAA\)](#).

Accommodating Employees with Stroke

People with stroke-related limitations may develop some of the limitations discussed below, but seldom develop all of them. Also, the degree of limitation will vary among individuals. Be aware that not all people who are aging will need accommodations to perform their jobs and many others may only need a few accommodations. The following is only a sample of the possibilities available. Numerous other accommodation solutions may exist.

Questions to Consider:

1. What limitations is the employee experiencing?
2. How do these limitations affect the employee and the employee's job performance?
3. What specific job tasks are problematic as a result of these limitations?
4. What accommodations are available to reduce or eliminate these problems? Are all possible resources being used to determine possible accommodations?
5. Has the employee been consulted regarding possible accommodations?
6. Once accommodations are in place, would it be useful to meet with the employee to evaluate the effectiveness of the accommodations and to determine whether additional accommodations are needed?
7. Do supervisory personnel and employees need training?

Accommodation Ideas:

Limitations

Attentiveness/Concentration

- Alternative Lighting

- Applications (apps)
- Apps for Memory
- Behavior Modification Techniques
- Cubicle Doors, Shields, and Shades
- Electronic Organizers
- Environmental Sound Machines / Tinnitus Maskers / White Noise Machines
- Flexible Schedule
- Full Spectrum or Natural Lighting Products
- Job Coaches
- Job Restructuring
- Marginal Functions
- Modified Break Schedule
- Noise Canceling Headsets
- Sound Absorption and Sound Proof Panels
- Task Separation
- Telework, Work from Home, Working Remotely
- Timers and Watches
- Uninterrupted "Off" Work Time
- Verbal Cues
- Wall Calendars and Planners
- Worksite Redesign / Modified Workspace
- Written Instructions

Balancing

- Living Independently
 - Bath Chairs
 - Canes
 - Crutches
 - Grab Bars
 - Grab Bars - Toilet Hinged Arm Support
 - Personal Safety and Fall Alert Devices

- Rollators and Rolling Walkers
- Scooters
- Stair Assists
- Stair Lifts
- Swing Away Grab Bars
- Toileting Aids
- Walkers for Tall Individuals
- Walkers with Seats
- Walkers
- Moving Around
 - All-Terrain Scooters
 - All-Terrain Wheelchairs
 - Canes
 - Crutches
 - Leg Extenders for Walkers
 - Personal Transportation and Mobility Products
 - Rollators and Rolling Walkers
 - Rolling Safety Ladders
 - Scooters
 - Stair Assists
 - Stair Lifts
 - Walkers
 - Walkers for Tall Individuals
 - Walkers with Seats
- Working at Heights
 - Aerial Lifts
 - Fall Protection
 - Rolling Safety Ladders
- Working Safely
 - Anti-fatigue Matting
 - Evacuation Devices

- Fall Protection
- Padded Edging
- Personal Safety and Fall Alert Devices
- Protective Eyewear

Decreased Stamina/Fatigue

- Aide/Assistant/Attendant
- Anti-fatigue Matting
- Elevating Wheelchairs
- Ergonomic Assessments
- Ergonomic Equipment
- Flexible Schedule
- Job Restructuring
- Periodic Rest Breaks
- Scooters
- Stand-lean Stools
- Telework, Work from Home, Working Remotely
- Walkers
- Wearable Anti-fatigue Matting
- Wheelchairs
- Worksite Redesign / Modified Workspace

Droling

- Drooling Aids
- Flexible Schedule
- Rest Area/Private Space
- Telework, Work from Home, Working Remotely

Executive Functioning Deficits

- Apps for Concentration
- Checklists
- Color Coded System
- Cubicle Doors, Shields, and Shades

- Environmental Sound Machines / Tinnitus Maskers / White Noise Machines
- Form Generating Software
- Job Coaches
- Job Restructuring
- Marginal Functions
- Modified Break Schedule
- Noise Canceling Headsets
- Recorded Directives, Messages, Materials
- Sound Absorption and Sound Proof Panels
- Speech Recognition Software
- Timers and Watches
- Wall Calendars and Planners

- Apps for Anxiety and Stress
- Behavior Modification Techniques
- Counseling/Therapy
- Flexible Schedule
- Job Restructuring
- Marginal Functions
- Modified Break Schedule
- Monitor Mirrors
- On-site Mentoring
- Service Animal

- Simulated Skylights and Windows
- Supervisory Methods
- Support Animal
- Support Person
- Telework, Work from Home, Working Remotely
- Uninterrupted Work Time

Situations and Solutions:

A court employee was having difficulty with emotions after returning to work following an acquired brain injury due to a stroke.

She was diagnosed with pseudo-bulbar affect (PBA) that caused outbursts of uncontrollable laughter at seemingly inappropriate times. The employee asked that her co-workers be educated on PBA so they would better understand what could be viewed as inappropriate behavior. The employee agreed to talk to her neurologist about the training. She was also accommodated with extra breaks to help manage her stress, a temporary lightening of her workload, and a flexible schedule to allow her time for counseling and doctor appointments.

A customer service representative for a financial institution had long-term blurry vision from a stroke and could no longer read his computer screen.

The employer provided screen reading software for his computer so that information present on the screen and information inputted into the system would be read back to him.

A teacher had been released to return to work following a stroke resulting in hemiparesis of her dominant left side.

The individual had undergone treatment and rehabilitation, but had trouble balancing, standing, walking, and grasping small items, such as a pen. Accommodations provided included a stand/lean stool, a height-adjustable laptop tray with a laptop connected to the classroom smart board, low-tech grip aids for writing, and grab bars placed along the walls of the class and in the hallways for assistance with balancing.

An assistant manager for a nonprofit had complete loss of vision in one eye and low vision in the other due to a stroke.

The individual was having problems reading printed paper copies and emails. A portable magnifier, stand magnifier, and a closed-circuit television (CCTV) were used to magnify materials.

An automobile parts assembler had hoped to regain strength in his dominant right side following a stroke resulting in hemiparesis.

He had exhausted FMLA leave and decided to request reassignment. He was placed in a vacant stock clerk position that was less physically demanding. He was also provided a scooter to access the facility and a tablet device was mounted to the handlebars, which allowed him to access purchasing and receiving documents with one hand.

A medical receptionist was returning to work following a stroke resulting in hemiparesis of her non-dominant left side.

She had difficulty holding the phone while taking notes and typing information into a computer. Her employer provided a wireless headset and a one-handed keyboard as accommodations.

An employee returning to work after a stroke was dealing with depression.

As a result, the employee's performance was impaired and the previous supervisory method was no longer effective. The supervisor agreed to meet with the employee weekly to discuss performance and conduct issues that were becoming problematic, as well as put accommodations into place. Among the accommodations: a flexible schedule for health care appointments, a diagram to help with the flow of duties, templates to assist in report writing, and a move to an area with more natural lighting.

Products

There are numerous products that can be used to accommodate people with limitations. JAN's Searchable Online Accommodation Resource at <https://askjan.org/soar> is designed to let users explore various accommodation options. Many product vendor lists are accessible through this system; however, JAN provides these lists and many more that are not available on the Web site upon request. Contact JAN directly if you have specific accommodation situations, are looking for products, need vendor information, or are seeking a referral.
